

For our location in EMEA, we are looking for a: Software Engineer (m/f/d) Java

Your opportunity

You work with components for Swisslog's standard software frameworks and solutions based on Java/JEE, EJB, JPA and JSF. Furthermore you are responsible for the realization of warehouse- and automation management modules, as well as the user interface including visualization of our customers' warehouses. In addition you work in an international project team, with other departments and closely with our customers. Concluding you are responsible for design, implementation, testing and documentation of the software inhouse and onsite.

All about you

It is essential that you have earned a minimum of a **Bachelor's degree** in **computer science**, related subject or similar. You are well versed in Java programming language and have already implemented a project with it. Your profile is supported by knowledge in Object Oriented Design and strong skills in **Java (SE, EE)** and **enterprise frameworks**: EJB, JPA, JMS, Web Services.

You have an understanding of **Relational database concepts**, architecture and **SQL programming**. Also you have a willingness to travel occasionally (<20%). You speak excellent English and ideally German.

What you get from us

Swisslog is part of a global organization that strives to provide opportunities, a healthy work-life balance and a wide range of social activities. Just some of the benefits our teams enjoy including:

- A great working environment
- Working with advanced technologies
- Encourages new ideas & innovations
- Empowerment & project ownership
- Multi-cultural workplace that promotes diversity
- Future-oriented projects with leading brands
- Hands on training & skills development
- Domestic and international career opportunities.

Start making a difference today!
